The future of mobility – all from a single source

Continental is your partner for global aftermarket solutions and services. Our ambition as a global technology group, and one of the leading automotive suppliers and tire manufacturers, is to always have the best solution for our customer's needs. With a wide-ranging portfolio, the right technology, the top quality from an original equipment supplier, and services that provide real added value.

The Continental Aftermarket product portfolio

- Batteries
- Belt Drive Components
- Brakes
- Common rail diesel systems
- Filter
- Blower and fan systems
- Fuel systems
- Tires
- Tire pressure monitoring systems (TPMS)
- Windshield Wipers
- Window and headlight cleaning systems
- Sensors
- Actuators
- Turbocharger

Die Mobilität der Zukunft aus einer Hand.

Continental ist Ihr Partner für Aftermarket- & Services Lösungen aus einer Hand. Unser Anspruch als globaler Technologiekonzern, einer der führenden Automobilzulieferer und Reifenhersteller: für die Bedürfnisse unserer Kunden stets die passende Lösung zu haben. Mit einem breit aufgestellten Portfolio, der passenden Technologie, der Top-Qualität eines Erstausrüsters und Services, die echten Mehrwert bringen.

Das Continental Aftermarket Produktportfolio

- Batterien
- Bremsen
- Common Rail Dieselsysteme
- Filter
- Gebläse- und Lüftersysteme
- Kraftstoffsysteme
- Reifen
- Reifendruckkontrollsysteme
- Riementriebkomponenten
- Scheibenwischer
- Scheiben- und Scheinwerferreinigungssysteme
- Sensoren
- Stellelemente
- Turbolader

La mobilité du futur auprès d'un seul fournisseur

Continental est votre partenaire pour les pièces détachées et solutions SAV provenant d'un seul fournisseur. En notre qualité de groupe technologique global, d'équipementier automobile d'envergure et de fabricant de pneus, nous poursuivons l'objectif suivant : avoir toujours la solution adaptée aux besoins de nos clients. Grâce à un portfolio diversifié, à des technologies adaptées, à la qualité supérieure d'un fournisseur de première monte et à des services qui apportent une réelle valeur ajoutée.

La gamme des pièces détachées Continental

- Batteries
- Freins
- Systèmes diesel à rampe commune
- Filtres
- Systèmes de soufflante et de ventilation
- Systèmes d'alimentation en carburant
- Pneus
- Systèmes de contrôle de la pression des pneus
- Composants de transmission par courroie
- Essuie-glaces
- Systèmes de nettoyage des vitres et des phares
- Capteurs
- Actionneurs
- Turbocompresseurs

La movilidad del futuro de un solo proveedor

En Continental encontrará cualquier solución posventa o servicio que esté buscando. No solo somos un grupo tecnológico internacional, sino también uno de los principales proveedores de la industria del automóvil y uno de los fabricantes de neumáticos más importantes, por lo que nuestra misión es tener siempre la solución adecuada para las necesidades de nuestros clientes. Para ello ofrecemos una amplia gama de productos con la tecnología más avanzada y la misma calidad superior que un fabricante de equipos originales, además de proporcionar servicios que aportan un valor añadido real.

La cartera de productos de Continental Aftermarket

- Baterías
- Frenos
- Sistemas diésel common rail
- Filtros
- Sistemas de soplado y de ventilación
- Sistemas de combustible
- Neumáticos
- Sistemas de control de la presión de los neumáticos
- Componentes para la transmisión por correa
- Escobillas limpiaparabrisas
- Sistemas limpiaparabrisas y lavafaros
- Sensores
- Actuadores
- Turbocompresores

La mobilità del futuro da un'unica fonte

Continental è il vostro partner per soluzioni aftermarket e servizi di assistenza da un'unica fonte. Il nostro impegno come gruppo tecnologico globale, uno dei maggiori produttori di pneumatici e fornitori del settore automotive, è avere sempre la soluzione giusta per le esigenze dei nostri clienti. Con un portafoglio di ampio respiro, la tecnologia adatta, il top della qualità di un fornitore di primo equipaggiamento e servizi di assistenza che apportano un reale valore aggiunto.

Il portafoglio prodotti Continental Aftermarket

- Batterie
- Freni
- Sistemi Diesel Common Rail
- Filtro
- Sistemi di ventilazione
- Sistemi di alimentazione del carburante
- Pneumatici
- Sistemi di controllo della pressione degli pneumatici
- Componenti della trasmissione a cinghia
- Spazzole tergicristallo
- Sistemi di lavaggio vetri e fari
- Sensori
- Attuatori
- Turbocompressore

Мобильность будущего из одних рук

Компания Continental — ваш надежный партнер на рынке автозапчастей и сервисных услуг. Мы работаем без посредников. Наш глобальный технологический концерн является одним из ведущих поставщиков комплектующих для автомобильной промышленности и производителей шин. Мы всегда стремимся находить наиболее оптимальные решения с учетом всех потребностей наших клиентов. Наш широкий ассортимент, отточенные технологии, первоклассное качество оригинальных запчастей и отличные услуги дадут вам множество преимуществ.

Ассортимент автозапчастей компании Continental

- Аккумуляторы
- Тормоза
- Дизельные системы Common Rail
- Фильтры
- Системы воздушных устройств и вентиляторов
- Системы подачи топлива
- Шины
- Системы контроля давления в шинах
- Компоненты ременных передач
- Стеклоочистители
- Системы очистки стекол и фар
- Датчики
- Исполнительные элементы
- СТурбонагнетатели

Fuel Supply Unit

Electric next-generation fuel pumps/fuel supply units installed in tanks guarantee a permanently reliable supply of fuel to the engine. They are employed as in-tank pumps for combustion engines, with injection systems for petrol or diesel supply. A return-flow returns unused fuel to the tank.

The primary functions are:

Fuel supply of the individual or central injection system, with specified pressure and throughput, once the in-vehicle voltage has been switched on system pressure retention in the fuel supply line under all operating conditions.

The fuel supply unit generally consists of the fuel pump (sometimes with swirl pot), a filter and flange with corresponding connections. In addition, the supply unit can be equipped with a lever-type sender and can be used in combination with an immersion tubular-type sender.

Kraftstoff-Fördereinheit

Die im Tank montierten elektrischen Kraftstoffpumpen/-Fördereinheiten der neuen Generation gewährleisten eine permanent zuverlässige Kraftstoffförderung zum Motor. Sie werden als In-Tank-Pumpen für Verbrennungsmotoren mit Einspritzanlage zur Benzin- oder Dieselförderung eingesetzt. Ein Rücklauf führt nicht verbrauchten Kraftstoff zurück zum Tank.

Die Hauptfunktionen sind:

Kraftstoffversorgung der Einzel- oder Zentraleinspritzanlage mit spezifiziertem Druck und Durchfluss nach Einschalten der Bordspannung, Systemdruckerhaltung in der Kraftstoffversorgungslleitung bei allen Betriebszuständen.

Die Kraftstoff-Fördereinheit besteht in der Regel aus der Kraftstoffpumpe (z. T. mit Schlingertopf), einem Filter und dem Flansch mit den entsprechenden Anschlüssen. Zusätzlich kann die Fördereinheit mit einem Hebelgeber ausgestattet sein bzw. in Kombination mit einem Tauchrohrgeber zum Einsatz kommen.

Pompe à carburant complètes

Les pompes et systèmes électriques d'alimentation en carburant de haute technologie installés dans le réservoir garantissent une alimentation moteur fiable et constante. Ces systèmes sont constitués d'une pompe interne au réservoir pour les moteurs à combustion, et d'un système à injection pour l'alimentation en essence ou diesel. Un système de retour permet de réacheminer le carburant inutilisé vers le réservoir.

Les principales fonctions sont les suivantes:

Alimentation en carburant du système d'injection spécifique ou centralisé, avec une pression et un débit spécifiés, après mise sous tension du circuit électrique du véhicule. Rétention de la pression système dans la conduite d'alimentation, quelles que soient les conditions de fonctionnement.

Le système d'alimentation en carburant est généralement constitué d'une pompe à carburant (avec ou sans cuve à turbulence), d'un filtre et d'une bride, avec les raccords adéquats. Le système peut également être équipé d'une jauge à levier et utilisé avec une jauge tubulaire immergée.

Unidade de suministro de combustible

Cuando se instalan las bombas de combustible y unidades de suministro de combustible eléctricas de nueva generación en el depósito, se garantiza un suministro de combustible permanente y fiable al motor. Se utilizan en bombas de depósitos de combustible para motores de combustión, con sistemas de inyección de suministro de gasolina o gasoil. Un dispositivo de flujo de retorno devuelve al depósito el combustible que no ha sido utilizado.

Las funciones primarias son:

Suministro de combustible del sistema de inyección individual o central, a la presión y volumen de flujo especificados, una vez conectado a la alimentación del vehículo. Retención de la presión del sistema en la línea de suministro de combustible en todas las condiciones de funcionamiento.

La unidad de suministro de combustible consta generalmente de la bomba de combustible (a veces con cámara de turbulencia), un filtro y una brida con las conexiones correspondientes. Además, la unidad de suministro puede estar equipada con un sensor de palanca, siendo posible su empleo con un sensor tubular de inmersión.

Unità di alimentazione carburante

Le pompe di alimentazione/unità di alimentazione elettriche di nuova generazione installate nel serbatoio garantiscono un'alimentazione costante e affidabile del carburante al motore. Sono impiegate come pompe interne al serbatoio per i motori a combustione, che utilizzano sistemi di iniezione benzina o diesel. Un sistema a flusso invertito riporta il carburante inutilizzato nel serbatoio.

Le funzioni principali sono:

Alimentazione del carburante al sistema di iniezione individuale o centrale, alla pressione e alla capacità specificate, dopo la messa in funzione del veicolo. Mantenimento della pressione del sistema nei condotti di alimentazione in qualsiasi condizione di esercizio.

L'unità di alimentazione del carburante è costituita generalmente dalla pompa di alimentazione (talvolta munita di vaso di turbolenza), da un filtro e da una flangia con i relativi collegamenti. Inoltre, l'unità di alimentazione può essere munita di un galleggiante a leva o utilizzata congiuntamente a un galleggiante tubolare a immersione.

Устройства подачи топлива

Установленные в топливном баке электрические устройства для регулирования подачи топливного насоса обеспечивают бесперебойное снабжение двигателя топливом. Они применяются в качестве внутрибаковых насосов для двигателей внутреннего сгорания с системой впрыска для подачи бензина или дизельного топлива. Неиспользованное горючее возвращается назад в топливный бак по обратной магистрали.

Основными функциями являются:

Подача топлива для точечной и центральной системы впрыскивания со специфицированным давлением и расходом после включения бортового напряжения. Поддержание уровня системного давления в трубопроводе системы подачи топлива в любых рабочих режимах.

Устройство подачи топлива состоит, как правило, из топливного насоса (возможно наличие успокоительной камеры), фильтра и фланца с соответствующими соединениями. Дополнительно устройство подачи может быть оснащено датчиком рычажного типа или использоваться в комбинации с датчиком с погружной трубкой.

Lever-Type Sender

Fuel tank contents are measured by means of senders (lever-type/tubular-type senders), which either form one unit with the pump or are installed separately. Lever-type senders, in conjunction with an electrical indicator, are used to measure the fuel level.

How they work

The liquid of the fuel level to be measured contains a float which rises or falls when the level changes and, by means of a lever, then causes a brush wiper spring to be moved on a resistance winding or a thick-film resistor. In both cases, an adaptation to the tank characteristics is implemented.

A resistance value corresponding to the liquid level is generated. The value of the respective resistance is measured by an electrical indicator and displayed in terms of fuel level values. With some transmitters the grounding is attached to the casing. Other transmitters are without grounding, i.e. the grounding is routed over a separate connection. Lever-type senders can be additionally equipped with a warning contact in order to signal the attainment of a filling level limit value (reserve), as well as for continuous measurement.

Hebelgeber

Die Messung des Tankinhaltes erfolgt mittels Sensoren (Hebel- / Tauchrohrgeber), die entweder mit der Kraftstoff-Fördereinheit eine Einheit bilden oder aber separat verbaut sind. Hebelgeber dienen zur Messung des Kraftstoffvorrates in Verbindung mit einem elektrischen Anzeigerät.

Funktionsweise

Die Flüssigkeit des zu messenden Vorrates trägt einen Schwimmer, der bei Niveauänderung sinkt oder steigt und dabei über einen Hebel eine Schleiffeder auf einer Widerstandswicklung oder einem Dickschichtwiderstand bewegt. In beiden Fällen erfolgt eine Anpassung an die Tankkennlinie.

Ein der Flüssigkeitshöhe entsprechender Widerstandswert wird eingestellt. Die Größe des jeweiligen Widerstandswertes wird mit einem elektrischen Anzeigerät gemessen und in Vorratswerten angezeigt. Bei einigen Gebern liegt die Masse am Gehäuse an. Andere Geber sind massiefrei, d.h. die Masse wird über einen separaten Anschluss zugeführt. Hebelgeber können zusätzlich mit einem Warnkontakt ausgestattet sein, um neben der kontinuierlichen Messung das Erreichen eines Füllstandgrenzwertes (Reserve) zu signalisieren.

Jauge à levier

Les jauges sont utilisées pour mesurer le niveau de carburant dans le réservoir (jauges à levier/jauges tubulaires); elles peuvent faire partie intégrante du système d'alimentation ou être installées séparément. Associées à un indicateur électrique, les jauges à levier permettent de mesurer le niveau de carburant.

Fonctionnement

Le liquide dont le niveau est mesuré contient un flotteur, qui monte/descend en fonction des variations de niveau; un levier permet d'actionner un ressort de porte-balais sur un bobinage à résistance ou une résistance en couche épaisse. Dans les deux cas, une adaptation aux caractéristiques du réservoir a lieu.

Une valeur de résistance correspondant au niveau de liquide est générée. La valeur de la résistance est mesurée au moyen d'un indicateur électrique et affichée sous forme de niveau de carburant. Sur certains émetteurs, la masse est reliée au blindage. Sur d'autres émetteurs, il n'y a pas de masse : la masse est dirigée vers une autre connexion. Les jauges à levier peuvent également être munies d'un contact avertisseur permettant d'assurer une mesure continue et de signaler qu'un niveau de remplissage limite a été atteint (réserve).

Sensore de palanca

La medición del contenido del depósito de combustible se lleva a cabo por medio de sensores (de palanca o tubulares), que pueden formar una sola unidad con la bomba o ir instalados por separado. Los sensores de palanca, asociados a un dispositivo de indicación eléctrico, se emplean para realizar la medición del nivel de combustible.

Modo de funcionamiento

El depósito de combustible contiene un flotador, que sube o baja con los cambios de nivel y que a continuación, por medio de una palanca, hace que un resorte de escobillas se desplace sobre un devanado de resistencia o un resistor de película gruesa. Este sistema se adapta a las características de cada depósito.

Se establece un valor de resistencia que corresponde al nivel del líquido. El valor de la resistencia se mide con un dispositivo indicador eléctrico y se presenta en forma de valores de nivel de combustible. En algunos sensores, la masa va conectada a la carcasa. Otros carecen de masa, es decir, se dirigen a una conexión independiente. Los sensores de palanca pueden estar dotados de un contacto de advertencia adicional, para indicar que se ha alcanzado el valor límite de llenado (reserva) así como para efectuar mediciones continuas.

Galleggianti a leva

La misurazione del livello di carburante nel serbatoio avviene per mezzo di galleggianti (a leva o tubolari) che possono costituire parte integrante della pompa oppure essere installati a parte. I galleggianti a leva sono utilizzati insieme a un indicatore elettrico per misurare il livello di carburante.

Come funzionano

Il carburante contiene un galleggiante che sale o scende all'aumentare o al diminuire del livello e, mediante una leva, aziona la molla di una spazzola su un avvolgimento di resistenza o su un resistore a pellicola spessa. In entrambi i casi, è necessario un adattamento alle caratteristiche del serbatoio.

Si stabilisce un valore di resistenza che corrisponde al livello del liquido. Il valore della rispettiva resistenza viene misurato con un indicatore elettrico e visualizzato con valori espressi in termini di livello di carburante. In alcuni trasmettitori, la terra è collegata alla carcassa. Altri trasmettitori sono privi di messa a terra e la stessa avviene su un altro collegamento. I galleggianti a leva possono essere muniti anche di un contatto di segnalazione che oltre a indicare il raggiungimento di un valore limite del livello (riserva) consente la misurazione continua.

Датчик рычажного типа

Измерение уровня топлива в баке производится с помощью датчиков (датчиков рычажного типа / датчиков с погружной трубкой), которые либо образуют один унифицированный узел с устройством подачи топлива, либо устанавливаются отдельно. Датчики рычажного типа в связке с электрическим индикаторным устройством служат для измерения запаса топлива.

Принцип работы

На поверхности жидкости, запас которой необходимо измерить, находится поплавков, который опускается или поднимается при изменении уровня жидкости и при этом посредством рычага приводит в движение контактную щетку обмотки резистора или толстопленочного резистора. В обоих случаях имеет место адаптация к характеристической кривой уровня заполнения топливного бака.

Устанавливается сопротивление, соответствующая данному уровню жидкости. Величина сопротивления фиксируется электрическим индикационным устройством и отображается в виде величины уровня топлива. В некоторых датчиках «масса» выведена на корпус. Другие не соединены с корпусом, т.е. «масса» выведена через отдельное соединение. Датчик рычажного типа может быть дополнительно оснащен контактом предупредительного сигнала, чтобы наряду с непрерывным измерением оповещать о достижении граничного значения уровня наполнения (запаса).

Fuel Pump

The fuel pump is a component of a fuel supply unit sited in the tank. Within the supply units, the pump is sometimes installed in a swirl pot. Fuel pumps are sometimes equipped with a filter.

Kraftstoffpumpe

Die Kraftstoffpumpe ist Bestandteil einer Kraftstoff-Fördereinheit, die im Tank betrieben wird. Zum Teil ist die Pumpe innerhalb der Fördereinheit in einem Schlingertopf verbaut. Die Kraftstoffpumpen sind zum Teil mit einem Filter ausgestattet.

Pompe à carburant

La pompe à carburant est un élément du système d'alimentation situé dans le réservoir. A l'intérieur du système, la pompe est parfois installée dans une cuve à turbulence. Les pompes à carburant sont parfois équipées d'un filtre.

Bomba de combustible

La bomba de combustible es un componente de una unidad de suministro de combustible situada en el depósito que puede instalarse en una cámara de turbulencia y que, en ocasiones, están equipadas con un filtro.

Pompa carburante

La pompa di alimentazione è un componente dell'unità di alimentazione situato nel serbatoio. Talvolta, la pompa è installata in un vaso di turbolenza, chiamato comunemente cestello. Le pompe possono essere munite di filtro.

Топливный насос

Топливный насос является составной частью устройства подачи топлива, установленной в топливном баке. Насос часто крепится внутри устройства подачи топлива в успокоительной камере. Топливные насосы могут быть оснащены фильтрами.

Petrol Injection Valve

The exact quantity of fuel is determined for every engine operating state. The injection valve injects the calculated quantity exactly dosed at the prescribed time in front of the cylinder input valve and thus ensures clean and efficient fuel utilization.

Benzin-Einspritzventil

Für jeden Betriebszustand des Motors wird die exakte Menge an Kraftstoff ermittelt. Das Einspritzventil sprüht die errechnete Menge genau und dosiert, zum vorgegebenen Zeitpunkt, vor das Einlassventil des Zylinders und sorgt somit für eine saubere und effiziente Ausnutzung des Kraftstoffes.

Injection essence

La quantité exacte de carburant est définie pour chaque état de fonctionnement du moteur. L'injecteur injecte précisément la quantité calculée d'essence et effectue le dosage, au moment donné, en amont de la vanne d'admission du cylindre, assurant ainsi une utilisation saine et efficace du carburant.

Valvola di iniezione benzina

Para cada estado de funcionamiento del motor se determina la cantidad exacta de combustible. La válvula de inyección inyecta exactamente la cantidad calculada y dosifica, en el momento predeterminado, delante de la válvula de admisión del cilindro y vela por un aprovechamiento limpio y eficiente del combustible.

Válvula de inyección de gasolina

Per ogni condizione di esercizio del motore viene rilevata la giusta quantità di carburante. La valvola di iniezione spruzza la quantità calcolata in modo preciso e dosato, nel momento prestabilito, davanti alla valvola di aspirazione del cilindro assicurando, in tal modo, un utilizzo pulito ed efficiente del carburante.

Бензиновая форсунка

Каждому рабочему состоянию двигателя соответствует точное количество подаваемого топлива. Форсунка впрыскивает точно рассчитанное количество топлива дозированно, в заданный момент времени перед клапаном подачи цилиндра и тем самым обеспечивает аккуратное и эффективное использование топлива.

Fuel Pressure Regulator

The fuel pressure regulator is attached at the end of the distribution pipe and keeps the fuel pressure at a constant value. Located in the metal casing of the fuel pressure regulator there is a spring-loaded membrane, which allows the opening of the return-flow channel if the set pressure is exceeded. In this way, surplus fuel can flow back to the fuel tank.

Kraftstoff-Druckregler

Der Kraftstoff-Druckregler ist am Ende des Verteilerrohres angebracht und hält den Kraftstoffdruck auf einem konstanten Wert. Im Metallgehäuse des Kraftstoff-Druckreglers gibt eine federbelastete Membran beim Überschreiten des eingestellten Druckes den Rücklaufkanal frei. Dadurch kann überschüssiger Kraftstoff zum Kraftstoffbehälter zurückfließen.

Régulateur de pression de carburant

Le régulateur de pression de carburant est relié à l'extrémité de la conduite de distribution et permet de maintenir le niveau de pression du carburant. A l'intérieur du boîtier métallique du régulateur, se trouve une membrane à ressort permettant l'ouverture du canal d'écoulement inverse en cas de surpression. Ceci permet aux surplus de carburant de retourner dans le réservoir.

Reguladore de presión de combustible

El regulador de presión del combustible está conectado al final de la tubería de distribución y mantiene la presión de combustible a un valor constante. En la carcasa metálica del regulador de presión de combustible, existe una membrana accionada por un muelle que permite la apertura del canal de flujo de retorno en caso de sobrepasarse la presión establecida. De este modo, el exceso de combustible puede dirigirse de nuevo hacia el depósito de combustible.

Regolatore di pressione carburante

Il regolatore di pressione del carburante è collegato in fondo al tubo di distribuzione e mantiene costante la pressione del carburante. All'interno della carcassa metallica del regolatore di pressione si trova una membrana caricata a molla che consente l'apertura del canale di riflusso in caso di superamento della pressione prestabilita. In questo modo, il carburante in eccesso può tornare nel serbatoio.

Регулятор давления топлива

Регулятор давления топлива устанавливается в конце распределительной трубы и поддерживает постоянное давление топлива. Расположенная в металлическом корпусе регулятора давления топлива подпружиненная мембрана при превышении установленного давления деблокирует канал обратной подачи. В результате лишнее топливо может стекать обратно в топливный бак.

Fuel filter

Fuel filters are an important part of every fuel supply unit, providing vital protection for fuel systems and engines against damage caused by tiny particles of dirt. Depending on the system, one or more filters can be fitted in conjunction with a fuel pump or supply unit.

Kraftstofffilter

Kraftstoff-Filter sind wichtige Bestandteile einer Kraftstoff-Fördereinheit. Durch ihre Siebfunktion schützen sie das Kraftstoffsystem und den Motor vor der Zerstörung durch die Einlagerung immer kleiner werdender Schmutzpartikel. Je nach System können ein oder mehrere Kraftstoff-Filter zusammen mit der Kraftstoffpumpe bzw. -Fördereinheit verbaut sein.

Filtre à carburant

Le filtre à carburant est une pièce importante du système d'alimentation en carburant car il permet de protéger le système d'alimentation et le moteur contre les dommages causés par les fines impuretés contenues dans le carburant. Selon le système installé, un ou plusieurs filtres peuvent avoir été posés parallèlement à la pompe à carburant ou au système d'alimentation.

Filtro combustible

Los filtros de gasolina son una parte importante de cualquier sistema de suministro de combustible, ya que protegen tanto al motor como a sus componentes de posibles daños provocados por pequeñas partículas de suciedad. Dependiendo del sistema, se pueden utilizar uno o más filtros en conjunción con una bomba o unidad de suministro.

Filtro carburante

I filtri carburante proteggono i componenti dell'impianto di alimentazione e il motore dai danni causati dalle particelle di sporco e costituiscono quindi una parte molto importante dell'unità di alimentazione. A seconda dell'impianto, possono essere montati uno o più filtri, unitamente ad una pompa o unità di alimentazione.

Топливный фильтр

Топливный фильтр представляет собой одну из важнейших составных частей устройства подачи топлива. Благодаря своей фильтрующей функции они защищают топливную систему и двигатель от разрушения в результате накопления постоянно уменьшающихся частиц загрязнений. В зависимости от системы в топливном насосе или устройстве подачи топлива могут быть установлены несколько топливных фильтров.
